How is it important to drink mineral or alkaline water?

Water has a great bearing on the functioning of our body. Water is one such element that performs a jugglery task in body to take care of all the vital organs and cells. It is that cog in the wheel which is often overlooked because of the hustle-bustle of today's life. Drinking water is often an element of profane and shirking by humans. Have you seen the twirl of parched earth before rains? Similar is the coiling inside the body when you keep it water-bereft for a long period of time and the result is a multitude of diseases.

Water does more to your body than just quenching your thirst. Every function, from petty to pertinent is commissioned into by water. The indispensability of water lies in the fact that it is the carrier of all the vital elements in the body viz. hormones, chemical messengers, elements, to all the parts of the body. If all the body parts do not receive equal water, the remote parts will be deprived of it and consequently will not get the essential elements. What is alkaline water?

Water has a pH 7. Different gases and chemicals change it to more acidic or more alkaline state. The quintessential alkaline water has pH of 8 or 9.

#### Bottled or Packaged Water

The branded water is usually sold in bottles which are made from Bisphenol, Polyethylene High Density Polyethylene, Polypropylene, and Polyethylene Terephthalate. When water is stored in such bottles, elements like arsenic, fluoride and aluminium are produced. Packaged water also leads to production of Dioxin, Leaching, Bacteria growth, debilitating the immune system, and carbon footprint. All of this can lead to cardiac conditions, diabetes, and cancer. RO water is a much safer option for us. One of the best ways to have safe drinking water is to have a RO water purifier that retains the essential minerals but drains out the toxic

substances. You can [Buy RO Purifier Online](#) and change the quality of drinking water at your home.

### **Importance of alkaline water**

Pollution, dust, smoke generate a lot of free radicals in our body which are a major cause of diseases. Alkaline water acts as a powerful antioxidant and rids our body of the free radicals. Pollution is a big problem plaguing the capital city of Delhi and the best way to ward off the pollutants from water is to have a water purifier. Make use of [RO service Delhi](#) and reduce the problems of free radicals in your water.

With the present consumption pattern, we are very likely to up the ante in ruining the acid-alkaline balance of your body. Cheese, soft drinks, meat, coffee and the like disturb this balance and lead to excessive acidic condition in our body. Outskirts of Delhi also suffer from pollution be it Gurgaon or Noida so, contact your nearest **RO service Gurgaon** and make sure you have a healthy glass of water.

A water purifier produces alkaline water with small ionised minerals that makes circulation of blood easy and promotes better hydration in the body. If you are living in Delhi, you run a higher risk of drinking polluted water than people of other places. You must immediately contact providers of **Water purifier Delhi** and ensure safe drinking water at home.
